

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (original) A contents replay system comprising:

a registration unit which registers location information indicating a specific location and contents information indicating contents to be replayed at said specific location, designated by a user;

a detection unit which detects that said contents replay system is currently located at said specific location; and

a replay unit which replays said contents at said specific location detected by said detection unit.

2. (currently amended) A contents replay system comprising:

a network;

a terminal connected to said network, said terminal comprising,

a first communication unit which transmits contents information indicating contents designated by a user of the terminal and that are to be replayed at a specific location designated by the user to said network,

a detection unit which detects that said ~~contents-replay system~~ terminal is currently located at said specific location, and

a replay unit which replays contents indicated by said contents information at said specific location; and

a server connected to said network, said server comprising a storing unit which stores said contents, and a second communication unit which transmits said contents to said terminal via said network in response to a request of said terminal.

3. (original) The contents replay system claimed in claim 2,

wherein said server transmits said contents to said terminal, before said detection unit detects said specific location.

4. (original) The contents replay system claimed in claim 2,

wherein said server transmits said contents to said terminal, when said detection unit detects said specific location.

5. (currently amended) A contents replay system comprising:

a network;

a first terminal connected to said network, which comprises
a first communication unit for transmitting to said network
location information indicating a specific location designated by
a user and contents information indicating contents designated by
the user and that are to be replayed at said specific location to
~~said network;~~

a server connected to said network, said server comprising,
a registration unit which registers said location
information and said contents information transmitted from said
first terminal,

a storing unit which stores said contents, and

a second communication unit which transmits said location
information and said contents to said network;

a second terminal connected to said network, said second
terminal comprising,

a third communication unit which receives said location
information and said contents transmitted from said server via
said network,

a detection unit which detects that said ~~contents-replay~~
~~system~~ second terminal is currently located at said specific
location based on said location information, and

a replay unit which replays said contents at said specific
location.

6. (original) The contents replay system claimed in claim 5, wherein said server transmits said contents to said second terminal, before said detection unit detects said specific location.

7. (original) The contents replay system claimed in claim 5, wherein said server transmits said contents to said second terminal, when said detection unit detects said specific location.

8. (currently amended) A contents replay system comprising:
a network;
a first terminal connected to said network, which comprises a registration unit for registering in a removable storage unit location information indicating a specific location designated by a user and contents information indicating contents designated by the user and that are to be replayed at said specific location ~~in a removable storage unit~~;

a server connected to said network, said server comprising,
a storing unit, which stores said contents, and
a first communication unit, which transmits said contents to said network; and

a second terminal connected to said network, said ~~server~~
second terminal comprising,

a second communication unit which receives said contents
transmitted from said server via said network,

a detection unit which detects that said ~~contents-replay~~
~~system~~ second terminal is currently located at said specific
location based on said location information stored in said
removable storage unit, and

a replay unit which replays said contents transmitted from
said server via said network at said specific location.

9. (original) The contents replay system claimed in claim 8,
wherein said server transmits said contents to said second
terminal, when said detection unit detects said specific
location.

10. (currently amended) A contents replay system
comprising:

a network;

a server connected to said network, said server comprising,

a storing unit which stores contents designated by a user,

and

a first communication unit which transmits said contents to
said network;

a first terminal connected to said network, said first terminal comprising,

a second communication unit which requests said server to transmit said contents and receives said contents from said server via said network,

a registration unit for registering in a removable storage unit location information indicating a specific location designated by the user and said contents ~~in a removable storage unit~~;

a second terminal connected to said network, said second terminal comprising,

a detection unit which detects that said ~~contents replay system~~ second terminal is currently located at said specific location based on said location information stored in said removable storage unit, and

a replay unit which replays said contents stored in said removable storage unit at said specific location.

11. (new) The contents replay system of claim 1, wherein said registration unit comprises an input selection unit for the user to select the specific location and the contents information prior to arrival at the specific location.

12. (new) The contents replay system of claim 2, wherein said terminal comprises an input selection unit for the user to select the specific location and the contents information prior to arrival at the specific location.

13. (new) The contents replay system of claim 5, wherein said first terminal comprises an input selection unit for the user to select the specific location and the contents information prior to arrival at the specific location.

14. (new) The contents replay system of claim 8, wherein said first terminal comprises an input selection unit for the user to select the specific location and the contents information prior to arrival at the specific location.

15. (new) The contents replay system of claim 10, wherein said registration unit comprises an input selection unit for the user to select the specific location and the contents information prior to arrival at the specific location.
